Introducing the **Safe Sit™** Manual Handling Aid

The Challenge

Safe Sit™ was designed and developed by an oncology nurse within the Bristol Haematology and Oncology Centre in response to the difficulties experienced by radiographers when assisting patients to sit up after therapy and work-related injuries sustained whilst undertaking these procedures.

Traditional manual handling equipment is unsuitable for use with complex and sensitive imaging and radiotherapy equipment. **Safe Sit™** was developed as a cost-effective manual handling solution.

The Solution

Working alongside University Hospital Bristol NHS Foundation Trust, Silvalea Direct is bringing **Safe Sit™** to market.

Safe Sit™ is a single-patient use manual handling aid designed to be used by the patient several times before disposal thereby helping to minimise cross-infection within the healthcare environment.

Safe Sit™ has been specifically designed to be quick and easy to use providing patients with additional help when sitting up after a clinical procedure. **Safe Sit™** minimises potential injury to the healthcare professional assisting them. The use of **Safe Sit™** may help to safely improve efficiency within radiotherapy and imaging departments.

In addition to use in radiotherapy suites **Safe Sit™** can be used on CT, MRI and PET scanners, trolleys, stretchers, beds, examination couches and even operating tables after day case surgery or investigations.

As a licensed product developed in collaboration with the NHS a proportion of **Safe Sit™** income will help fund development of future NHS products.

Safe Sit™ is protected by UK patent GB2428195 and a Community Design Registration 000385158-0002

Alternative uses for the **Safe Sit™**

● CT MRI & PET Scanners

● Trolleys

● Stretchers

● Hospital Beds

● Examination Couches

● Operating Tables

NHS Price £18.00 each (sold in packs of 10)
